

## Did you know...

ADI carries a vast array of products that earn points towards LEED certification in new construction and retrofit projects. Be sure to check out the USGBC site for more information on LEED and what it can mean for you.

**Going Green**

The U.S. Department of Energy estimates that every pound per square inch of tire under-inflation wastes four million gallons of gas per day in the U.S.! Tires that are under-inflated by five to seven pounds per square inch can increase fuel consumption by as much as 10 percent, or two to three miles per gallon, while reducing tire life as much as 15 percent. Have the tire pressure checked on your service trucks and your personal vehicles right away and save yourself money today.

The U.S. Environmental Protection Agency (EPA) estimates that if the energy efficiency of commercial and industrial buildings in the U.S. improved 10 percent, Americans would save about \$20 billion and reduce greenhouse gases equal to the emissions from about 30 million vehicles. Check out the Green vendors and products listed on the site and see how we can work together to reach that goal.
